

Scale with robust mobility feature

For stationary and portable use

With a mobile floor scale, weight or quantity determination can be conducted at any time and location in large or flexibly utilized areas.

To provide optimal protection for the scale, it is housed in a mobile frame to which the indicator, power supply (battery, battery unit), and other accessories are attached.

The four lockable rubber casters ensure a stable position of the scale. In case of mandatory calibration, the chassis can be secured and aligned on the ground with four adjustable feet.

Various display units and additional options are available depending on the requirements and desired functionality.

Available Options

- Power supply via 12V battery unit or independent power supply 230V/12V
- Roll printer, label printer, USB data logger, Bluetooth or WLAN module
- Rotatable and swiveling bracket for the indicator
- Simple weight display or display unit with extended functionality
- Additional reference scale for piece weight determination
- Visual-acoustic signaling device, external signal tower

Areas of Application

- Goods receipt, warehouse, production, picking, inventory
- Weight and piece count determination
- Check weighing, counting, dosing
